

Install SC4Deluxe (CD Version) in Wine

This document describes installing SC4Deluxe into a 32bit wine prefix on Ubuntu or Ubuntu/Gnome 14.04. It will likely work on other flavours, but I have not tried any, yet.

I tried to write this in a way that everyone could be successful, even the novice.

Important Note: If you are using Ubuntu 14.04 or older - When you finish this process and go to launch SC4D, close all other programs first, SC4D will not play nice with other processes running. When it starts up, it will be in the background, wait a minute and then **Alt+Tab** to bring it to the foreground.

You will need your **SC4Deluxe discs** and, (optionally), the following updates

- UPDATE_SKU1_TO_P1_B638.EXE
- SC4Update4BAT.exe
- Create a folder (**SC4DELUXE1**) on your Desktop. Now copy all the files from Disc 1 into your new Desktop folder.
- Do not put Disc 2 into CD drive until the installer requests it

Enter the following command in a Terminal

- **env WINEPREFIX=~/.wine-SC4D wine control**
 - this will create a new wine prefix **wine-SC4D** and open the Wine Control Panel within the **.wine-SC4D** prefix
- Open **Add/Remove Programs**
 - Click **Install**
 - Navigate to **setup.exe** in the **SC4DELUXE1** folder on your Desktop
 - Select the **setup.exe** file
- Click **Install** when the SC4 window comes up
- Enter your code from the CD case when prompted
- Install to the default directory
- Register later
- Likely the progress bar will not work but the current action displays as normal
- The first disc will install very quickly because it is installing from your harddrive
- When the dialog comes up **Insert Disc 2** put the disc in your drive and wait for one minute so the disc has a chance to register with the system
 - Click **OK**
 - The disc will take significantly longer to load
 - Be patient - it is working
- When the Install dialog disappears SC4 is installed

Keep **Add/Remove Programs** open to install **UPDATE_SKU1_TO_P1_B638.EXE** and **SC4Update4BAT.exe**

This part is completely optional if all you want to play is vanilla SC4D.

If you plan on installing the NAM you will need - **UPDATE_SKU1_TO_P1_B638.EXE**

If you want to install the TELotFix or plan on doing some modding you will need - **SC4Update4BAT.exe**

- These **must** be installed in this order
 - Click **Install**
 - Navigate to the location of **UPDATE_SKU1_TO_P1_B638.EXE**
 - Select the **UPDATE_SKU1_TO_P1_B638.EXE** file and follow the prompts
 - this will install **UPDATE_SKU1_TO_P1_B638.EXE** into your windows environment in **.wine-SC4D** (To see the new entry in the program list you have to close Add/Remove Programs and then re-open it)
 - Click **Install**
 - Navigate to the location of **SC4Update4BAT.exe**
 - Select the **SC4Update4BAT.exe** file and follow the prompts
 - this will install **SC4Update4BAT.exe** into your windows environment in **.wine-SC4D** (To see the new entry in the program list you have to close Add/Remove Programs and then re-open it)

You can now close **Add/Remove Programs** and also **Wine Control Panel** and the Terminal
